The technology revolution is transforming the traditional arbitration process. New smart technologies are increasing the efficiency and quality of arbitrations, and virtual arbitrations are now the norm. As the use of AI becomes more prevalent in arbitral proceedings, some predict that AI will provide parties with a cost-efficient alternative to the human arbitrator, advocating that decision-making AI can provide more rational and consistent decisions in international arbitration.

The YSIAC Seoul Virtual Debate will highlight evolving AI technologies as practitioners match up to consider the impact of artificial intelligence on international arbitration and the provocative question of whether an AI-arbitrator could help manage an arbitration or even replace an arbitral tribunal.
